SECRET/SECURITY INFORMATION

50X1

The mechanical condition of the plant equipment is excellent since the first units came into operation during the last year of World War II and were put into use during the 1948 - 1950 period.

- Total employment of the plants is about 250, which is high because a large part of the electric transmission lines leading from this station are managed and maintained by this power plant. Only personnel who must be present in an emergency are housed at the plant. All other personnel dwell in villages near the plant.
- The entire surroundings of the reservoir are a "restricted area" and are guarded by militiamen, who have their barracks at the reservoir. The Ministry for Industrial Affairs and the Ministry of Security grant permission to visit the plant itself which is also a "restricted area".
